Kamloops Life Guide — features and how to use them

Every screen, control and behaviour of the guide, written for residents, front-line staff and volunteers. Screenshots are from version 2026.09.13f.

Website: `https://kamloops-lifemap.neilxiang.workers.dev` · Version 2026.09.13f · Places last checked 2026-09-11 · Prepared September 2026

14	287	6	$0
task cards, in three groups	verified places on the map	languages, complete throughout	free, no ads, no sign-up

1. Opening the guide

Address `https://kamloops-lifemap.neilxiang.workers.dev` — any browser on any phone, tablet or computer. QR codes on the printed flyers open the same page.

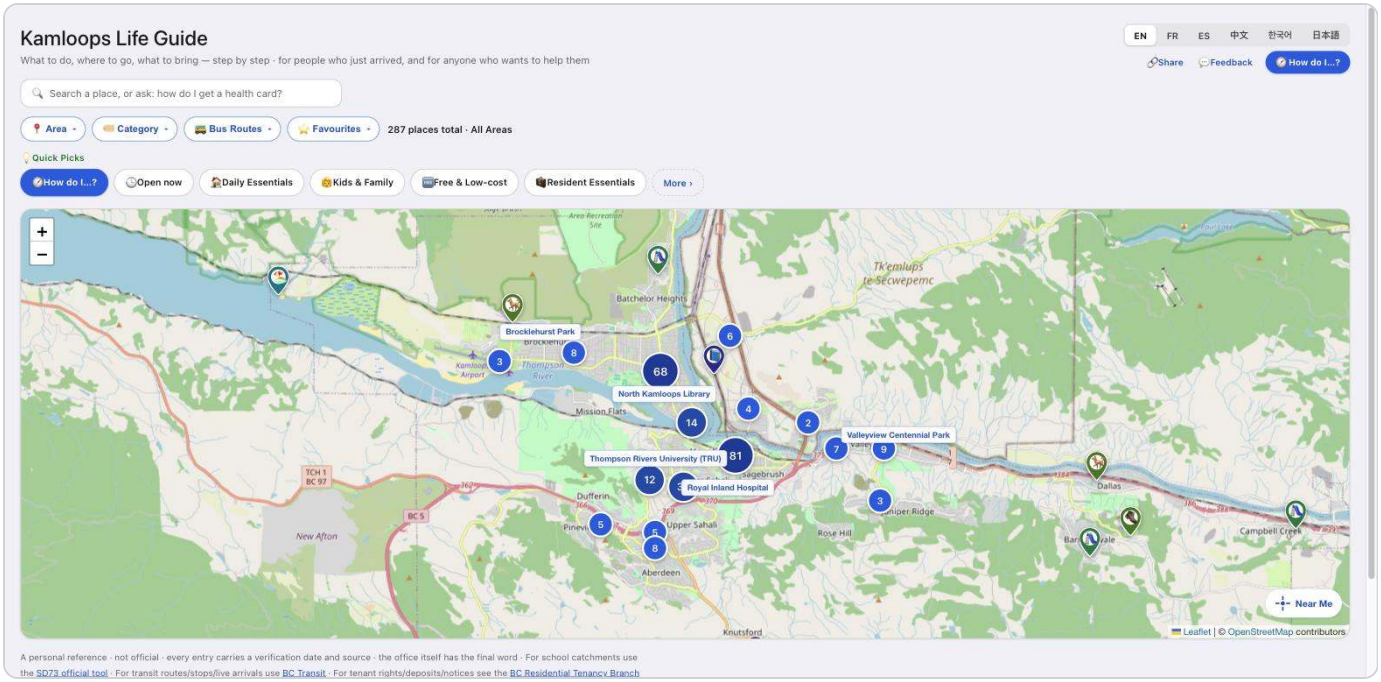

Scan to open

Language Six buttons at the top right on a computer or tablet. On a phone, to keep the header uncluttered, they collapse into one button — a globe icon and the current language — that opens a list of full names. The page follows a link's language first, then the language you chose last time on that device, then the phone's own language, then English. Everything changes at once: cards, map labels, place notes, buttons.

Install Browser menu → *Add to Home Screen* (iPhone: Share → Add to Home Screen). The guide then opens full-screen and keeps working with no signal: the whole guide, all places, search and filters are stored on the device after the first visit. Only the map background and live directions need a connection.

First visit A small card on the map explains the three things the page does and says plainly: free, no sign-up, nothing collected. Tap ✕ once; it does not come back on that device.

Cost Nothing, for anyone, ever. No ads.

Desktop: language (top right), search, the four filter buttons, Quick Picks, and the map. The blue “How do I…?” opens the guide.

2. The guide: fourteen task cards

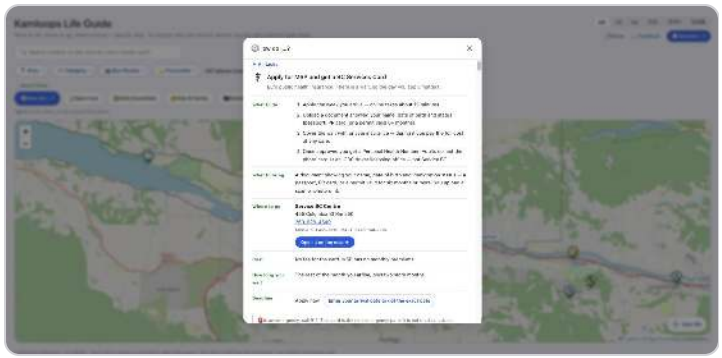

2.1 Finding a card

Tap **How do I…?** (header, or first chip in Quick Picks). The list is grouped into *First weeks*, *Ongoing* and *When something goes wrong*; each card shows the resident’s question, not the program’s name. The search box above the list matches your own words in your language and in English — “health card”, “MSP”, “医保”, “운전면허”, “école” all work — and understands common aliases. Press Escape or ✕ to clear it.

2.2 Reading a card

A card always has the same rows, in the same order, so a second card reads faster than the first:

- **Why** — one sentence on what happens if you skip it.
- **What to do** — numbered steps, in the order they must happen.
- **What to bring** — documents, exactly as the office names them.
- **Where to go** — the office: name, address, phone (tap to call), hours, and **Open on the map**.

A task card on desktop. “Open on the map” closes the guide and opens that office’s pin.

- **Cost · How long · Deadline** — with the deadline computed from your arrival date when you have entered one.
- **What to say at the counter** — an English sentence you can read out, with its meaning in your language.
- **Good to know** — the trap people fall into.
- **If you get stuck** — the settlement agency line (free, interpreters) and 2-1-1.
- **Official page** — the source it was checked against, and the date (2026-09-08).

2.3 The tools at the foot of a card

Button	What it does
Mark as done	Ticks the card — each step inside a card can be ticked on its own too, and ticking every step ticks the whole card automatically. The list shows “3 of 14 done”, and once you have started, the landing page shows a small “This week” strip with whatever is next and its countdown. Stored only on this device; tap again to untick.
Share	Opens the phone’s share sheet (or copies a link) pointing at this exact card, in this language — for example `?lang=zh&task=msp`. The person who opens it lands on the card, not the home page.
Print this card	Prints just the card on one page (or “Save as PDF” from the print dialog): steps, documents, office, hours, the sentence to say. Buttons and the map are left out.
Add to calendar	Shown on cards with a deadline once an arrival date is set. Downloads a calendar event with a reminder seven days before, carrying a link back to the card.
← **All tasks** / Back	Returns to the list. The phone’s Back button does the same; one more Back closes the guide.

2.4 Arrival date and deadlines

At the top of the list, **Arrival date** takes the day you landed in BC. Three cards then show a real date and a countdown: the BC licence (90 days), the first tax return (April 30 of the following year) and a human-rights complaint (one year). The date is stored only in this browser and can be cleared with one tap.

3. The map

3.1 Search

The search box narrows the map within the filters already on. It matches names, categories, areas and the notes, in your language and English, and understands several words at once (“pharmacy north shore”). With two or more results the map fits them; with exactly one it opens that place. If nothing matches, the empty state suggests the nearest thing — including handing you to the right task card when the question is a “how do I” rather than a “where is”.

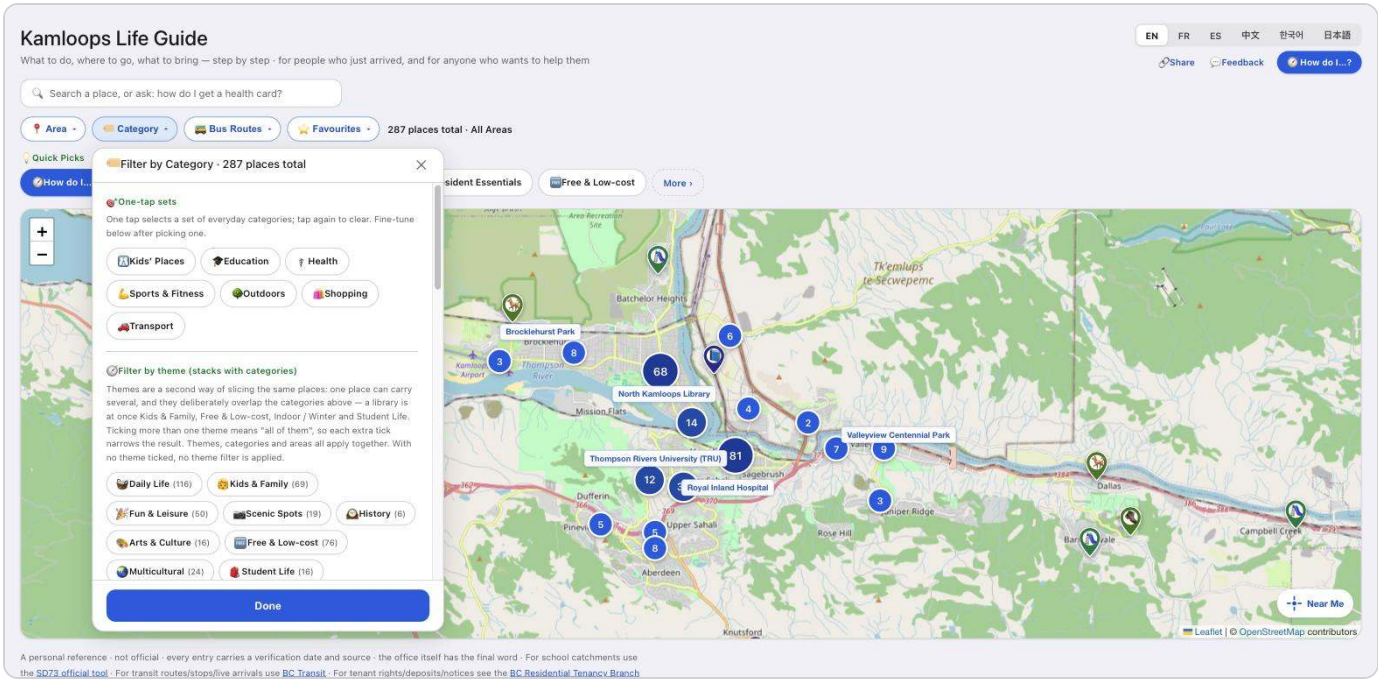

3.2 Quick Picks

One row of chips for the common starting points. Their order changes with the moment: after 17:00 and on Sundays *Open now* comes first; on weekends *Kids & Family* moves up; from November to March *Indoor / Winter* appears; someone arriving from a flyer sees *Resident Essentials* first. Share your location once and a *15-min walk* chip appears right after the guide, built from wherever you are standing. **More ›** opens the Category sheet, whose top block holds seven one-tap sets: Kids’ Places, Education, Health, Sports & Fitness, Outdoors, Shopping, Transport.

3.3 The four filters

Button	What it does
Area	Seven areas of the city, each named with a compass cue (“North Shore — across the river from Downtown”). Choose one or several; the map outlines the chosen area and zooms to it. Hovering a button on desktop previews its outline.
Category	Fifty-one categories in collapsible groups; a box before each group selects all of it. Every count next to a category is the number you would actually get given the other filters, the search and “open now”. The list doubles as the map legend — colours and icons match the pins. *Themes* at the top (Free & Low-cost, Kids & Family, Indoor / Winter, Multicultural, Student Life…) stack with categories using “and”.
Bus Routes	Fourteen BC Transit routes. Pick one: it is drawn on the map, every stop is named, other pins step back to grey dots, and a chip at the top of the map shows the route with a ×. Type a stop or a destination to find the routes that serve it. Fares and the live-schedule link are in the panel.
Favourites	Places you starred. They live only in this browser; **Copy code** turns them into a short text you can keep or paste into another device with **Import code**. A starred place hidden by the current filter still opens from this list.

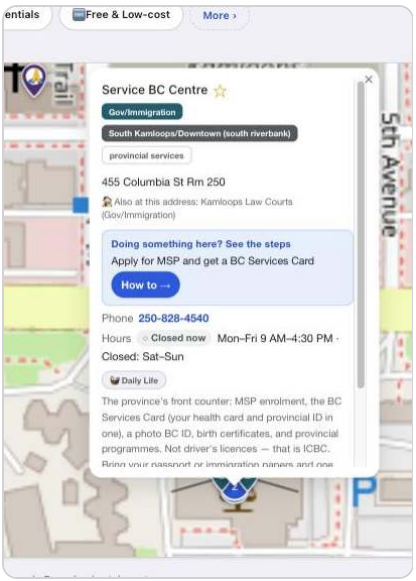

Active filters appear as chips under the row, each with its own ×; **Clear all** and **Reset** remove everything and offer *Undo* for five seconds. The count line always states how many places are on the map and in which areas.

The Category sheet: one-tap sets, themes, then the grouped category list with live counts.

3.4 A place card

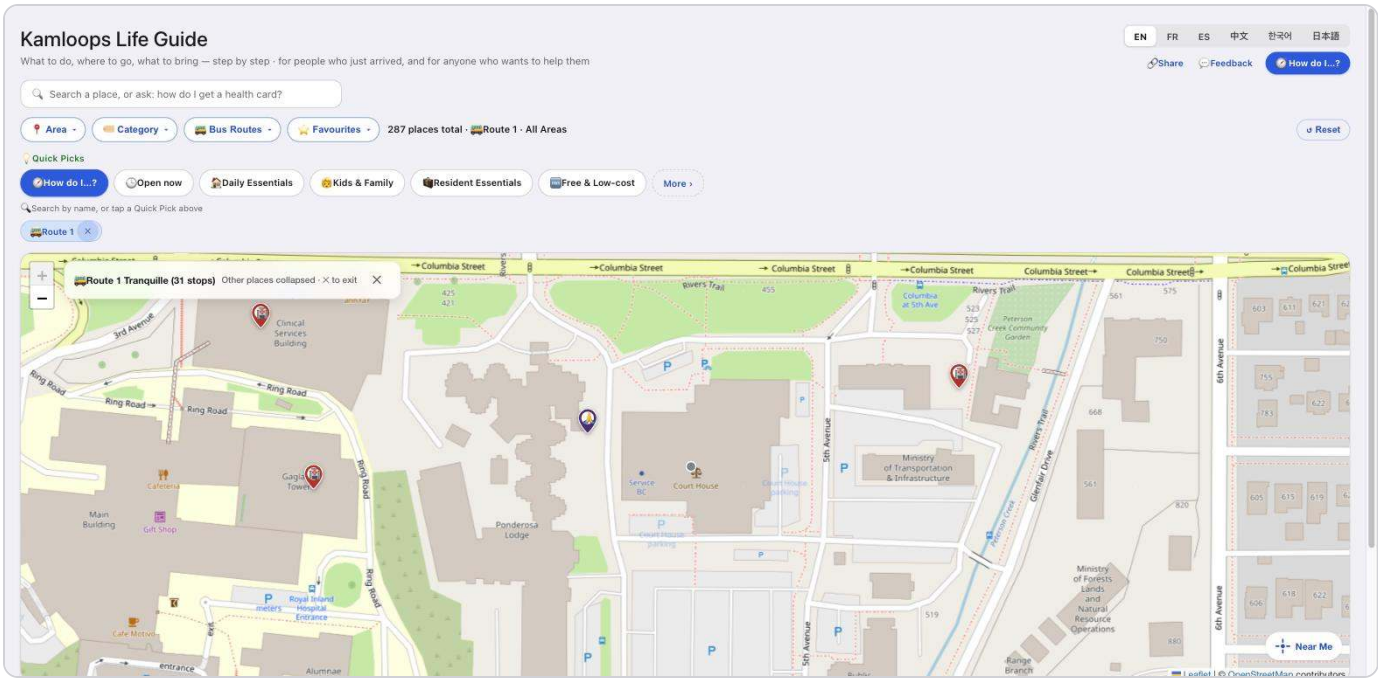

Tap any pin (or a number bubble to zoom into it). The card shows the name and category, an editor's ⭐ pick where applicable, address, phone (tap to call), website, opening hours with ● **Open now · until 4:30 PM** or **Closed · opens Mon 9:00** computed for Kamloops time, a note in your language (what to expect, who it is for, what to bring), theme tags, and two buttons: **Directions** (opens the phone's map app with the street address) and the ☆ star. Once you have shared your location, the card also adds how far it is ("110 m from you · about 1 min on foot") and, where one is close by, the nearest bus stop and its routes. When a place is one of the offices a task card sends you to, the card also offers **How to** → straight into that task.

A place card on a phone.

Two honesty markers: "hours unknown" is shown when hours cannot be established (never a guessed "open"), and "approximate location" when the exact building could not be confirmed — Directions then uses the address, which is reliable.

3.5 Bus routes

Route 1 selected: the line, named stops, and the route chip with ✕. Other places fade to grey dots until the route is closed.

3.6 Near me, share, feedback

- **Near me** (bottom right of the map) asks the phone for its location once, shows it as a pulsing dot and nothing is stored. The first tap explains this before asking.
- **Share** (header) copies or shares a link that reproduces the current screen — language, areas, categories, themes, open-now, search, route — so a colleague opens exactly the same view.
- **Feedback** (header) opens an email to the maintainer. Inside WeChat and similar apps, which cannot open email, the address is copied instead and a message says so.
- **Data notes** (footer) explains sources, the verification dates, the privacy position and the licence in full.

4. Phone, tablet and computer

On a phone the guide, the filters and the share dialog rise from the bottom as sheets: swipe down, tap outside, tap ✕ or press Back to close; the phone's Back button always closes the top layer first and never leaves the page by surprise. On a tablet held upright the same sheets appear; held sideways, and on a computer, they become side panels and dialogs so the map stays visible while filtering. Everything works with a keyboard alone (Tab, Enter, Escape) and with a screen reader; touch targets are 44 px; reduced-motion settings are respected.

5. Offline, privacy and safety

- **Offline.** After one visit the page, all 287 places and the fourteen cards are stored on the device. Without a connection the map background does not load — a notice says so — but search, filters, cards and the phone numbers all work.
- **Privacy.** No account, no sign-up, no personal information, no location stored. Favourites, ticked cards, arrival date and language live only in the browser; “Copy code” exports favourites as text you control. Anonymous usage counts (which cards and filters are used) carry a random identifier that is rotated every 90 days.
- **Emergency lines.** 911 (emergency), 811 (HealthLink BC), 211 (services), 310-6789 (mental health), 1-800-784-2433 and 9-8-8 (suicide crisis) are listed in the red strip under the filters and inside every “problem” card.
- **Not advice.** The page tells you where to go and whom to ask; it is not legal, medical, immigration or tax advice, and it says so.

6. For staff: printing and sharing

- **Flyers.** Letter and A4 flyers with a QR code, designed to print well in black and white, are available on request. Each carries a source tag so the maintainer can see which noticeboard brought people in.
- **A card for the counter.** Open the card in the resident’s language → **Print this card**. One page, no clutter.
- **A link for a specific need.** Filter the map (for example North Shore + Pharmacy + Open now) → **Share**. Or send one card: `https://kamloops-lifemap.neilxiang.workers.dev/?lang=ko&task=sin`.
- **Corrections.** Email neilxiang@hotmail.com with the place or card and what changed. Fixed within five working days, in all six languages at once.

7. Quick reference

I want to…	Do this
Change the language	Top right buttons. Remembered on this device.
Find out how to get a health card	How do I…? → “Apply for MSP” (or type “health card” in either search box).
See what is open right now	Quick Picks → Open now.
Find a pharmacy near the North Shore	Search “pharmacy north shore”, or Area → North Shore + Category → Pharmacy.
Know which bus goes to TRU	Bus Routes → type “TRU”.
Get directions	Tap the pin → Directions.
Save a place	Tap the pin → ☆. Find it again under Favourites.
Send a colleague exactly this view	Share (header) → copy link.
Print a card for someone	Open the card → Print this card.
Start over	Reset (next to the count) → Undo if you change your mind.
Report an error	Feedback (header) → email.

> One last thing: whoever you are reading this as, the point of all of it is the same — that a hard, confusing week goes a little easier for the person on the other end.
